

H.E.A.R APP

(A Collaborative Student Platform)

System Specifications:

- Users are categorized into (Students-Faculty members)
- Some users can have admin permissions, so no need to a user category called admin
- Users with admin permissions can use their admin privileges from a dashboard.

Functional Specifications:

- **Login page**
- **Handling forgotten passwords**
- **A Home page that shows:**
 - for students:
 - today's schedule (with the ability to expand and move to the schedule page)
 - most recent notifications (with the ability to expand and move to the notifications page)
 - To-do list (locally on the mobile app)
 - recent favorite materials and questions (bookmarks) (with the ability to expand and move to the materials page and view all bookmarked content)
 - for faculty members:
 - today's schedule (with the ability to expand and move to the schedule page)
 - most recent received notifications and added notifications (with the ability to expand and move to the notifications page)
 - To-do list (locally on the mobile app)
 - bookmarks
- **Bottom nav bar with:**
 - for students:
 - materials(may call them study and include both excersices(questions) and materials)
 - home
 - notifications
 - add button(materials-question)
 - schedule
 - for faculty members:
 - materials(questions & materials they added only)
 - home

- notifications
- add button(materials-question-notifications)
- schedule
- **Top nav bar:**
 - logo
 - profile icon (when clicked at user can access multiple functions: see their profile, app settings, admin dashboard (for admins) and logout)
 - search(can search for, materials, courses and faculty members(with name and filtering options))
- **Schedule page:**
 - for students:
 - shows schedule for students for the whole week(their section schedule only)
 - there is an option to see the schedule for all sections and with the faculty members in charge of them.
 - for faculty members:
 - shows schedule for faculty members for the whole week
 - there is an option to see the free(not in-use) labs and rooms in a specific time so the faculty member can change the time of the lecture or section easily
 - can see the other faculty members who teaches the same section and their schedule so they can organize their time with them.
- **Notifications page:**
 - for students:
 - shows notifications sent or generated for students by faculty members or the system when a faculty member changes the time for a section or lecture or when a system change happens to the schedule.
 - for faculty members:
 - shows notifications sent by other faculty member that may concern them (such as a doctor decided to give a lecture at the same time of a section) or notifications generated by the system.
 - Can also view the notifications they sent (notifications are sent as messages that reaches the concerned group of users (and it has to determine the (place-class-time) and a message content).
 - They can also delete or add new notifications.

- **Materials & questions (study) page:**

- for students:

- everything is categorized by courses they are enrolled in and then they can select between (materials and questions) as materials: would be study materials uploaded by users. questions would appear as questions titles or question heads when clicked on them you can answer them and view whether your answer is correct or not.
 - User has the ability to bookmark the questions and materials.
 - User can filter questions that appear to them using filters like (solved-upload date-type-bookmarked)
 - User can filter materials that appear to them using filters like (upload date-type-category-bookmarked)
 - they can upload Materials & questions but needs to wait for admin approval. The status of their uploads can be viewed. They can delete materials and questions they uploaded
 - many questions can be uploaded at once using formatted excel sheet.

- for faculty members:

- everything is categorized by courses they teach and then they can select between (materials and questions) but they view the questions with answers directly. They only can see what they uploaded. Uploads by other users can not be viewed.
 - User has the ability to bookmark the questions and materials.
 - User can filter questions that appear to them using filters like (upload date-type-bookmarked)
 - User can filter materials that appear to them using filters like (upload date-type-category-bookmarked)
 - they can upload Materials & questions but needs to wait for admin approval. The status of their uploads can be viewed. They can delete materials and questions they uploaded
 - many questions can be uploaded at once using formatted excel sheet.

- **Profile**

- for students:
 - can view their basic profile and account data stored in database but can't change it
 - however the ability to change passwords better be added
- for faculty members:
 - can view their basic profile and account data stored in database and can change (bio-scientific degree-job title)only
 - however the ability to change passwords better be added
- *additional note: when viewing materials and question users can have the ability to see info about the course they the materials and questions are uploaded such as its description and credit hours. Additionally when viewing uploads the name if the uploader appears and you click on it and see basic profile info info*
 - if student: (name, level, department)*
 - if faculty member: (name, department, bio, scientific degree, job title)*

- **Admin dashboard**

- should show brief info about (Users-Courses- and materials that needs approval) then user can expand and open specific pages for each of them:
- users:
 - retrieve paginated list of users with some basic data (id-role-name-isadmin)
 - can click on each user separately and view there full data.
 - Can change passwords
 - add users one by one (using fields to fill their data that needs to be stored in database)
 - can delete users and update there data(basic user data ,their profile data ,and change their role)
 - can add, delete, and update multiple users at the same time using formatted excel sheets
- Courses:
 - can add courses and add sections to them
 - can add faculty members to classes (lectures-sections)
 - can edit classes (updating and deleting) which means editing and schedule

- can delete courses
- can enroll students to courses using excel sheets.
- Materials and Questions:
 - accept materials and questions added by other users and reject them (can see questions grouped together by user and upload time so admin can select them at once and accept or reject them in case a user uploaded many questions at once using an excel sheet).
 - *Note: admin users can add questions and materials (from the normal user adding material page) with no need for them to be accepted.*
